I/O Expansion & Communication Modules

Schneider Electric

Welcome to the SCADAPack family of I/O Expansion and Communication modules, providing flexible I/O and telemetry options.

With the addition of I/O Expansion modules, any⁺ SCADAPack smart RTU is easily expandable from its base I/O configuration to more than 700 process I/O points. Available for a wide range of process I/O requirements, from digital and analog I/O to I/O simulators and a UPS module, a maximum of twenty I/O modules may be connected for an expansion of up to 512 digital outputs, 512 digital inputs, 128 analog inputs, 64 counters and 64 analog outputs, on some models.

Regardless of what communication format is required, there is a Communication module to fit the need. From the traditional leased line, phone line and radio-transceiver, to the latest Ethernet, SDI-12 and Bluetooth technologies, Communication modules make data transfer easy and cost-effective.

+ Please refer to the I/O Expansion Modules Compatibility Chart found on the last page of this document (some I/O Expansion modules are specific to SCADAPack 300 RTUs, others are specific to SCADAPack E RTUs. As for SP100, it does not support any such module)
